

# Arrays

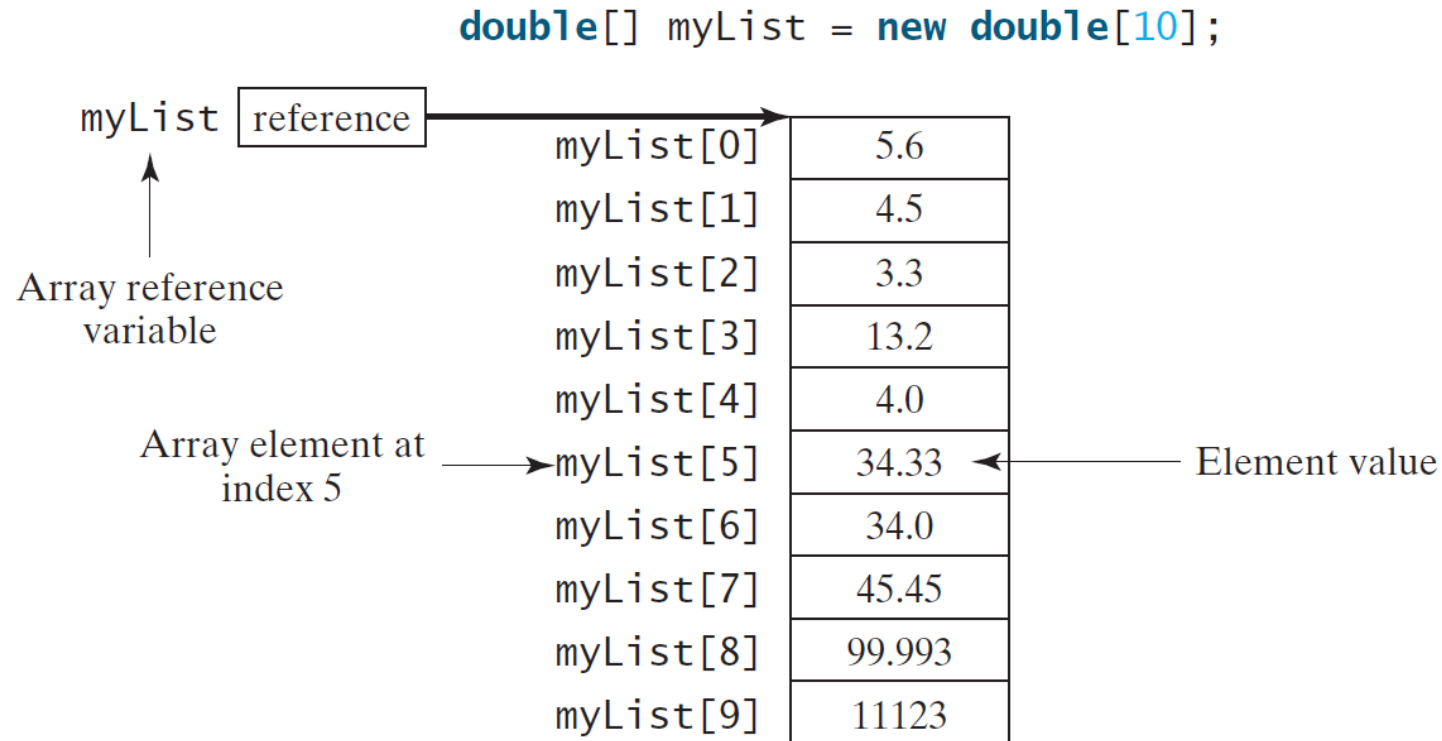

# Introducing Arrays

- Array is a data structure that represents a collection of the same types of data.

# One-Dimensional Arrays

- A one-dimensional array is an array with a single index.

# Declaring Variables of One-Dimensional Arrays

- `datatype[] arrayVar;`

- Example:

- `double[] myList;`

# Creating One-Dimensional Arrays

- `arrayVar = new datatype[arraySize];`
- Example:  
    `myList = new double[10];`

# Declaring and Creating in One Step

- `datatype[] arrayVar = new datatype[arraySize];`
- Example:
  - `double[] myList = new double[10];`

# The Length of One-Dimensional Arrays

- Once an array is created, its size is fixed. It cannot be changed. We can find its size using
  - `arrayVar.length;`
- Example:
  - `myList.length;`

# Default Values

- When an array is created, its elements are assigned the default value of 0 for the numeric primitive data types, '\u0000' for char types, and false for boolean types.

# Indexed Variables

- The array elements are accessed through the index. The array indices are *0-based*, i.e., it starts from 0 to `arrayVar.length-1`.
- Each element in the array is represented using the following syntax, known as an *indexed variable*:
  - `arrayVar[index];`
- Example:
  - `myList[5];`

# Declaring, Creating, and Initializing a One-Dimensional Array

- Declaring, creating, initializing in one step:
  - `double[] myList = {1.9, 2.9, 3.4, 3.5};`
- We must declare, create, and initialize the array all in one statement.

# Multidimensional Arrays

- A multidimensional array is an array with multiple indexes.
- The simplest form of the multidimensional array is the two-dimensional array, also known as a matrix.

# Two-Dimensional Arrays

- A two-dimensional array is an array with two indexes.

	[0]	[1]	[2]	[3]	[4]
[0]	0	0	0	0	0
[1]	0	0	0	0	0
[2]	0	0	0	0	0
[3]	0	0	0	0	0
[4]	0	0	0	0	0

`matrix = new int[5][5];`

	[0]	[1]	[2]	[3]	[4]
[0]	0	0	0	0	0
[1]	0	0	0	0	0
[2]	0	7	0	0	0
[3]	0	0	0	0	0
[4]	0	0	0	0	0

`matrix[2][1] = 7;`

# Declaring Variables of Two-dimensional Arrays

- `dataType[][] arrayVar;`
- Example:
  - `int[][] matrix;`

# Creating Two-dimensional Arrays

- `arrayVar = new dataType[10][10];`
- Example:
  - `matrix = new int[10][10];`

# Declaring and Creating in One Step

- `dataType[][] arrayVar = new dataType[10][10];`
- Example
  - `int[][] matrix = new int[10][10];`

# Declaring, Creating, and Initializing a Two-Dimensional Array

- We can also use an array initializer to declare, create and initialize a two-dimensional array. For example,

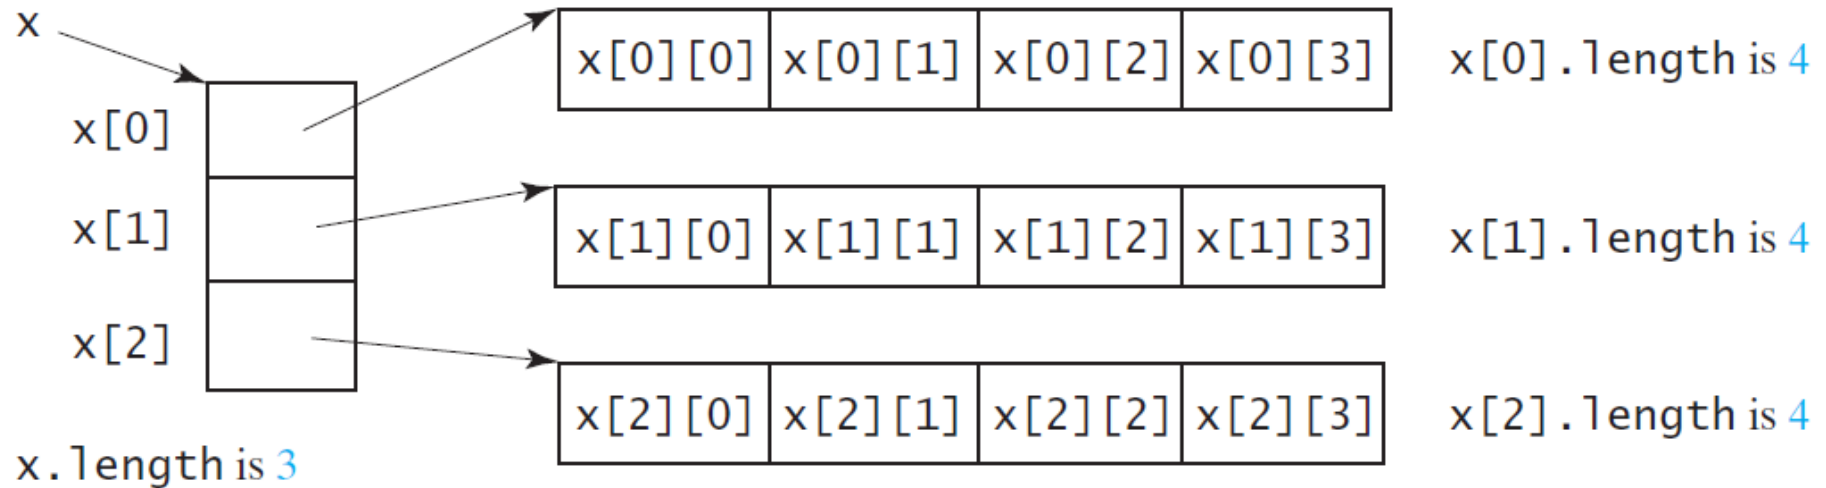

```
int[][] array = {  
    {1, 2, 3},  
    {4, 5, 6},  
    {7, 8, 9},  
    {10, 11, 12}  
};
```

	[0]	[1]	[2]
[0]	1	2	3
[1]	4	5	6
[2]	7	8	9
[3]	10	11	12

# Lengths of Two-dimensional Arrays

```
int[][] x = new int[3][4];
```

**Thank You**
